ALLIGATOR AXLE JACK

55D22196

55D22196

The axle jack is a three-stage, portable, self-contained unit equipped with double two-speed, manually operated pumps on the “operating” end of the jack frame. The lift mechanism includes three rams and an extension screw, all housed within an outer cylinder that forms part of the base. The hydraulic jack unit, along with the rams and outer cylinder, is spring-mounted to the “load” end of the jack frame. The fluid reservoir is integrated into the jack frame.

STANDARD FEATURES

- 75 Ton Capacity

DOUBLE 2 SPEED MANUAL PUMP

3 STAGE AXLE JACK

SAFETY BY-PASS VALVE AUTOMATICALLY PREVENTS LIFTING A LOAD GREATER THAN THE CAPACITY
